INFORMATION SECURITY AND DATA PRIVACY 28

INCREASE OVERALL **FLEET EFFICIENCY.**

WEBFLEET is a business unit dedicated to fleet management, vehicle telematics and connected car services.

Our Software-as-a-Service solutions are used by small to large businesses to help improve vehicle performance, save fuel or electricity, support drivers and increase overall fleet efficiency.

Today, Webfleet Solutions also provides services for the insurance, rental and leasing industries, car importers and companies that address businesses as well as individual drivers.

TRUSTED PLATFORM

Webfleet Solutions empowers mobility. We design and develop innovative products that make it easy for people to keep moving towards their goals. Every day millions of people around the world depend on WEBFLEET to make smarter decisions.

VEHICLE KNOWLEDGE

Webfleet Solutions has extensive experience in both aftermarket and line fitted equipment. We connect our solution to vehicles with conventional or electric power trains via OBD interfaces, CAN-bus and even the vehicle manufacturer's original connected car services.

SECURE DATA

The Webfleet Solutions platform is ISO/IEC 27001:2013 certified, ensuring that customers benefit from the highest levels of security, integrity and availability. It is also highly configurable and empowers customers to take complete control over their data.

SCALABLE PLATFORM

Webfleet Solutions is a market leader in the world of connected car with more than 848.000 active subscriptions worldwide. It offers scalability and power, processing over 50 billion data probes per quarter.

INTEGRATION PARTNER ECOSYSTEM

With a broad range of carefully selected integration partners, Webfleet Solutions has everything you need to adapt your software to fit the specific requirements of your business.

APIS AND APPS

The Webfleet Solutions open platform approach means the platform can integrate with your existing systems, ensuring you can seamlessly manage all your data.

ENHANCES YOUR CUSTOMERS AND **DRIVERS EXPERIENCE.**

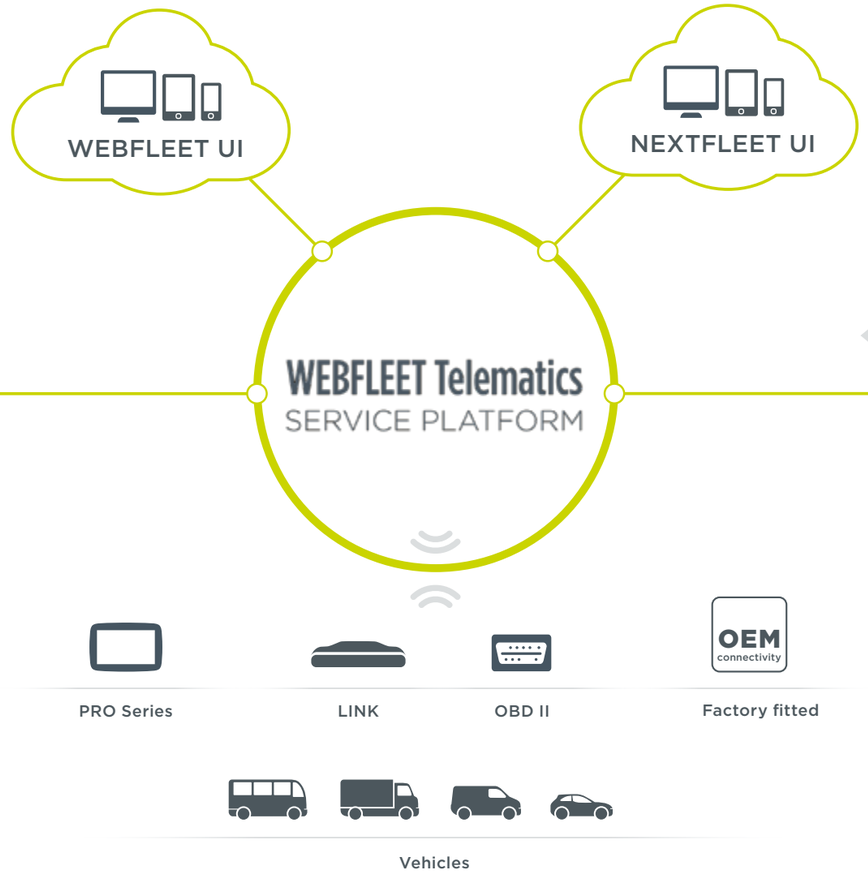
Webfleet Solutions Connected Car helps you decrease your operational costs and enhances your customers and drivers experience.

For over 18 years Webfleet Solutions has been connecting fleet managers with their vehicles.

Today Webfleet Solutions re uses its experience and technology to help ease the management of your fleets, enhance your customer service, and finally make drivers' lives just as simple as a click on their phones.

WEBFLEET helps make fleet operations more efficient via a comprehensive set of reports and easy-to-read dashboards, helping to improve driving performance, customer service and lower fuel, maintenance and administration costs.

NEXTFLEET helps car service providers, such as leasing, car rental and car importers/dealers to lower operational costs, by providing dynamic reporting for assets, maintenance management and administration.



Our **APIs** allow you to integrate vehicle data in systems or applications of your choice.

Through our hardware we provide access to your **vehicle's data**, such as odometer, driving behavior and maintenance, which is sent to our data centre.

Through our **apps**, we provide drivers with vehicle information such as trip data and driving performance, as well as handy tools such as "find my car" and vehicle health check.

HELPS YOU GET INSTANT CONTROL **OVER YOUR VEHICLES.**

As a fleet management service provider for over 18 years, Webfleet Solutions has developed a deep understanding of how to collect data about and from vehicles and make it relevant to the user.

Furthermore it connects all brands and types of vehicles – through line fitted or retro fitted devices. The WEBFLEET Telematics Service Platform offers car service providers the foundations on which to build applications to maximise the impact of collected data.

Our easy to use interface NEXTFLEET helps give you greater control of your vehicles, with dynamic reporting to enable improved levels of customer service as well as better asset and maintenance management and administration.

MAIN FEATURES

- A smart user experience
- A huge range of applications
- A stable and secured interface
- Rich reporting capabilities
- Connection with apps for drivers

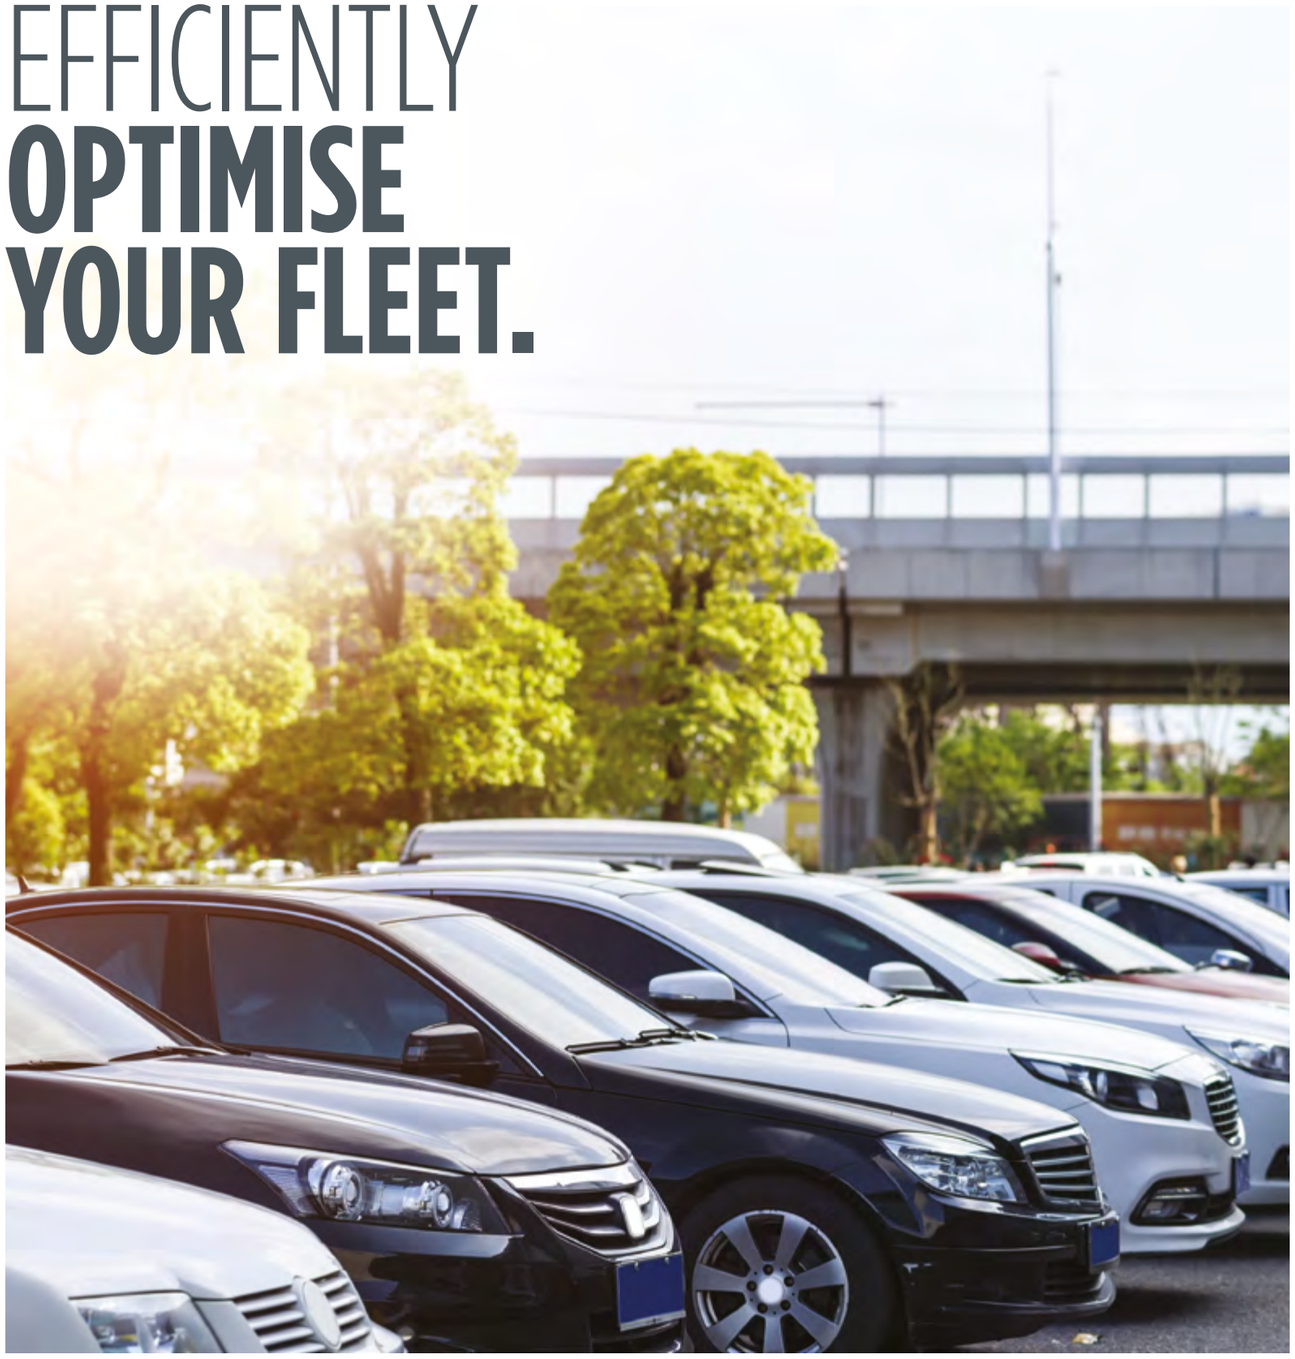
NEXTFLEET MAIN BENEFITS

- Improve CONTRACT MANAGEMENT by retrieving accurate mileage information.
- Helps reduce VEHICLE MAINTENANCE costs by steering vehicles to preferred workshops.
- Improve residual value and remarketing activities of vehicles by providing accurate, live and historic information of the vehicle state.
- Helps to increase customer satisfaction by enabling your customer support team with detailed information of the vehicle's condition.

WHAT NEXTFLEET CAN ENABLE ADDITIONALLY

- BREAKDOWN ASSISTANCE: be informed of the breakdown location and the specific cause, enabling driver assistance with direct and adequate customer service.
- STOLEN VEHICLE TRACKING: the location of a vehicle reported as stolen can be retrieved on demand, helping to speed up the recovery, decrease the cost of theft and lower insurance costs.
- ACCIDENT MANAGEMENT: facilitate roadside assistance as quickly as possible thanks to accident management.

TOOLS TO EFFICIENTLY **OPTIMISE YOUR FLEET.**



CONTRACT MANAGEMENT

Enhanced analysis helps achieve better business results. With reports and up to date dashboard information, NEXTFLEET gives you the tools to optimise your fleet.

GET UP TO DATE ACCESS TO THE RELEVANT KPIS

- Vehicle mileage (odometer retrieved directly from the car)
- Vehicle condition (maintenance/defects history, repairs...)
- End of the contract date
- Total mileage from the contract

Help to anticipate vehicle contract term and workshop visits, and inform the fleet manager and/or the driver accordingly.

Potential benefits

PROVE PERFORMANCE

Improving your contract management can help you better monitor and increase your fleet performance.

UP-TO-DATE NOTIFICATIONS

Stay informed and up to date on your fleet status.

PLAN QUICKLY **YOUR FLEET MAINTENANCE.**

VEHICLE MAINTENANCE

Helps anticipate maintenance cycles planning and reduce costs of maintenance over a fleet and/or a vehicle:

VEHICLES MALFUNCTIONS

Vehicles malfunctions will be notified based on MIL notifications and dashboard warnings, which allows you to plan repairs quickly, for instance by sending notifications or reminders to the driver.

MAINTENANCE SERVICE

Obtain notification when a vehicle is due for its next service.

MAINTENANCE REPORTS

Get maintenance reports based on mileage and receive alerts and maintenance data.

Potential benefits

GET INSIGHT

Detailed overview of issues like electronic failures or low oil levels. You know when a vehicle has an issue or needs service at the moment it occurs.

DECREASE COSTS

Helps you to decrease maintenance and repair costs as well as vehicle downtime.

OPTIMISED PLANIFICATION

Help optimise planning, which will also benefit the workshops.

REDUCE COSTS OF **RECOVERY.**

BREAKDOWN ASSISTANCE

THE TOOLS TO HELP REDUCE THE COST

- Supports b-call through the app in order to help the driver in a quicker and more efficient way.
- Position information can be made available via API to assist with breakdown services by a third party.*
- Get informed with more details why a vehicle has broken down (based on MIL).

Potential benefits

HAPPY CUSTOMERS

Enables you to extend your customer service offer and enhance customer satisfaction and loyalty.

** Integration with a recovery or roadside provider has to be provided separately.*

LOWERING THE AMOUNT OF **STOLEN VEHICLES IN YOUR FLEET.**

STOLEN VEHICLE LOCATION

Enables you to reduce the cost of vehicle recovery, replacement, repair and insurance.

Position information can be made available via API to assist with theft recovery by a third party.*

Potential benefits

CUT COSTS

Helps reduce costs of vehicle recovery, replacement, repairing and insurance.

HAPPY CUSTOMERS

Enables you to increase customer service quality by conducting quick enquiries and providing up to date support.

** Integration with a recovery or private security provider is necessary and has to be provided separately. The validation of the claim is the responsibility of the customer.*

IDENTIFYING PRECISELY **THE CONDITIONS OF THE CRASH.**

ACCIDENT MANAGEMENT

Reduce costs of vehicle recovery, replacement, repair and insurance by identifying the conditions of the crash:

- Up to date notification is provided in the interface, as well as the details in the crash log.
- A 3D accelerometer measures acceleration in all directions. If a crash is recognised, specific data is saved from before and after the crash, allowing reconstruction of the situation, such as location of the vehicle, and various operating parameters (speed, driving direction, frontal and lateral acceleration)
- With the data retrieved through the API combined with the crash log, a report can be created, showing reliable information such as vehicle speed, dangerous driving behaviour, vehicle position, accident details, map view of route.

Potential benefits

SUPPORTS MAINTENANCE OPTIMISATION

Helps decrease vehicle downtime and ensure preferred repair shops are used.

INSURANCE COSTS

Help Lower insurance costs by collaborating with roadside assistance providers and by reconstructing the actual crash conditions.

INCREASED QUALITY

Helps increase customer service quality by providing quick response and providing prompt support.

FRAUD COSTS

Displaying the actual crash conditions can help deter fraud conditions.

Integration with a recovery and/or insurance provider is necessary and is to be provided separately.

DELIVERS TAILORED INSIGHTS **FOR YOUR CUSTOMERS.**

WEBFLEET SOLUTIONS CONNECTED CAR

Webfleet Solutions connected car services delivers tailored insights, not only for you with NEXTFLEET, but also for your customers with WEBFLEET and their drivers with the MyCar app:

FLEET MANAGEMENT FOR YOUR CUSTOMERS

Our flagship fleet management, WEBFLEET gives your customers' mobility managers access to all the information they need. This help them to manage their fleet operations more efficiently via a comprehensive set of reports and easy-to-read dashboards. It can also help them to improve driver safety with OptiDrive 360, improve customer service and cut fuel, maintenance and administration costs.*

APP SUPPORT FOR DRIVERS

Webfleet Solutions MyCar app provides drivers with trip data and driving style monitoring, handy tools such as find my car, logbook and vehicle health check.

** More info on WEBFLEET is available on our website: www.webfleet.com*

THE MYCAR APP

SMARTER WAY TO PERFORM **EVERYDAY TASKS.**

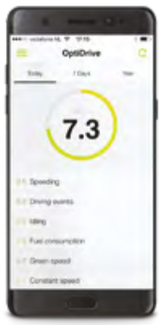
The Webfleet Solutions brand has always been synonymous with enabling mobility, allowing you to make the most of life while on the move. Now the MyCar app gives drivers a smarter way to perform everyday tasks.

Start your journey confidently: one glance at the welcome screen to confirm your fuel level and maintenance status. After each trip, keep an eye on your driving behavior. And when away from your car, another quick glance indicates whether the doors are locked!

The feature rich* but user-friendly dashboard will tell drivers at a glance:

- Trip information (number of trips, time spent on the road...)
- Driving score and ranking
- Live status of fuel level
- Distance to car and exact location
- Motion alert
- Vehicle health status
- Trip analysis
- Driving style
- Logbook

** Some features might not be available depending on vehicle type*



Let's drive business. Further.

webfleet solutions

GET CLOSER TO YOUR **DRIVER.**

At Webfleet Solutions, we help our customers get closer to their drivers. As a data processor, we act under the instruction of our customers to collect vehicle and driver related information. While we deliver fleet management services through our hardware, we process this data and present it through our apps, web-based user interfaces and APIs.

WEBFLEET SOLUTIONS DATA PROCESSING DESIGN PRINCIPLES:

1. THE WEBFLEET SOLUTIONS CUSTOMER IN THE DRIVING SEAT

Webfleet Solutions always operates under instructions from its customer. The data relates only to the customer, the customer is in control. This means that we offer the customer a highly configurable solution. While we propose various purposes for which the data can be used, the customer takes the final decisions for what purposes it is used and how in detail you configure and operate the system.

2. RESPECT OTHER STAKEHOLDER INTERESTS

Our system can be configured to recognise many different stakeholders with different roles, responsibilities and capabilities in different situations. Webfleet Solutions customers, for example, can allow drivers to distinguish between business and private trips and supervisors of drivers can be restricted in what they can see and do. We also support them in honouring the rights of the individuals, for example, with respect to the accessing and deleting of their data.

3. DATA, FIT FOR PURPOSE – NO MORE, NO LESS

Webfleet Solutions customers may configure what data is being collected and how long it is kept. To make it easier for them, we have included reasonable defaults, related to various use cases which our fleet customers typically have, but they are free to deviate from these default settings.

4. IF YOU CAN'T EXPLAIN IT, DON'T DO IT

We advocate ensuring everyone is on board with how their data is being used by providing explanatory materials, including online manuals and training materials, in simple and easy to understand language.

5. DETECT AND PROTECT AGAINST MISUSE

Information security is key at Webfleet Solutions, which is externally verified and certified annually. In the unlikely event of a data breach, Webfleet Solutions endeavours to have a robust incident response in place, which includes notifying you promptly and working with you towards resolution.

COMMITTED TO THE SECURITY OF INFORMATION **AND DATA PRIVACY.**

We invest continuously in our engineering, proven technologies, processes and people to ensure that we can always provide the most reliable telematics service platform on the market.

THE POWER OF WEBFLEET TELEMATICS SERVICE PLATFORM

ISO/IEC 27001:2013 Information Security Certified

Our service platform and our mature processes have been certified ensuring that our customers benefit from the highest level of protection for information security and data privacy.

Highest standard EV SSL encryption

Secure, encrypted login and data transfer to our service platform. You can trust your data is safe and secure

Local Installation

Nationwide and international installers

First class support

From local resellers and system integrators

App Center

Proven integrations and add-on apps available in the App Center

As one of the world's largest providers of telematics services, continual improvement in our service is important to make sure that we are the best partner for your business – now and in the future.

ISO 27001 CERTIFIED SCOPE

Our Information Security Management System (ISMS) covers all of our critical business processes necessary to secure the informational assets related to the WEBFLEET Telematics Service Platform. This includes the architecture, engineering, quality assurance and IT services provided to the Webfleet Solutions B.V at our Technology Headquarters in Germany, as well as our secure data center co-locations located within the European Union. This is in accordance with the ISO/IEC 27001:2013 standard and implemented as detailed in our Statement of Applicability version from November 2016.

"The ISO 27001 certification underpins that we're in complete control of our processes and even more importantly, that our client data is in safe hands, which is crucial for us providing a business critical fleet management "Software as a Service (SaaS) solution."

Thomas Schmidt,
Managing Director, Webfleet Solutions

INFORMATION SECURITY MANAGEMENT SYSTEM

The cornerstone of Webfleet Solutions' commitment to information security is our set of security policies and programmes which cover the organisation and management of information security. Based on our rigorous risk management programme aligned with our corporate objectives, a well-defined security perimeter is operated within the scope of the ISMS which includes, but is not limited to the following topics:

Information security policies

A detailed set of security policies designed to provide management direction and support of the information management system and all operational activities with respect to the WEBFLEET Telematics Service Platform.

Organisation of information security

Information security is everyone's business. The roles and responsibilities of all employees are based on information security. Together with a full-time information security team, everyone ensures compliance and governance to the ISO 27001 as well as alignment to the EU General Data Protection Regulation (GDPR), as well as all relevant local privacy legislations.

Human resources security

Information security is crucial prior to, during, and after the termination of employment. This includes selecting the right employees and providing them continual customised training.

Asset management

Inventory, ownership and maintenance throughout the asset life-cycle, ensures proper categorisation, labelling and risk owner assignment. This includes the secure handling of company intellectual property and customer data.

Access control

Through identity management, all access is limited to a need-to-have and a need-to-know basis. Additional controls assist to prevent unauthorized access. For example, system logging and monitoring provide real-time detection across our security perimeter.

Cryptography

We invest in state-of-the-art hardware and software solutions. Proven cryptographic technologies protect the confidentiality and integrity of our customer's data and our operational systems.

Physical and environmental security

We operate two independent Tier3+ data centres within the European Union due to its strict data privacy requirements. Our proven active/active configuration ensures disaster recovery and high availability capabilities which are tested regularly.

Operational security

We strive to maintain a managed, strict and repeatable process within our operations. By establishing security baselines, risk levels are managed and allow for efficient operational execution.

Operational security highlights:

- Operational procedures and documentation
- Backup / Restore tests of critical systems
- Monitoring of operational environments
- Incident, Problem and Change-Management based on best practices
- Capacity Management including load testing
- Segregation of duties
- System hardening
- Separation of environments for development, testing, and production
- Vulnerability scanning
- Penetration testing
- Patch management

INFORMATION SECURITY AND DATA PRIVACY

COMMUNICATIONS SECURITY

Security of data while “in-transit” requires a secure network through which to travel. We employ secure methods of communication such as:

- Network segregation
- VLAN separation, DMZ with multi-level Firewalls
- Network Access Controls (NAC)
- Encryption per default using latest industry standards

SYSTEMS ACQUISITION, DEVELOPMENT & MAINTENANCE

As a software company, the security and reliability of all of our products depend on secure coding principles and processes to ensure an agile product life cycle.

Our Secure Software Development Lifecycle includes:

- Peer reviewed design and coding
- Style guidelines
- QA functional / load testing
- Release and Change Management
- Static code reviews (OWASP Top 10 / SANS Top 25)

In addition, we facilitate the following programmes to secure our engineering perimeter:

- Security education for our work force
- Implementation-level security testing and review
- System hardening
- Vulnerability / patch management
- Web-Application-Security testing

Engineering
Software design analysis

Completed development
Static inspection of code

Quality assurance
Dynamic analysis of the application

Deployment
Deployment and stabilisation of the application

SUPPLIER RELATIONSHIPS

Managing external threats on the edge of our scope helps to ensure, that no additional risks are added to the organisation through our partner or supplier relationships. When possible, we select suppliers who maintain an international compliance standard for information security, and/or adhere to similar values as Webfleet Solutions related to the protection of information and data privacy.

INFORMATION SECURITY INCIDENT MANAGEMENT

Should a security incident occur, it is important to have an effective approach for managing the incident. This includes the timely communication to all interested parties, and reporting of internal security weaknesses to support a secure perimeter as dictated by the various legislative, regulatory and contractual agreements in place for notification.

INFORMATION SECURITY ASPECTS OF BUSINESS CONTINUITY MANAGEMENT

We manage a detailed business and information security continuity programme to ensure that the WEBFLEET Telematics Service Platform will be available to our customers even in the event of a disaster. Through our active/active data centre configuration, the probability of a major disaster in both centres is unlikely as each centre can maintain our entire operation if necessary. This means you can rely on the platform being available when you need it.

COMPLIANCE AND DATA PRIVACY

Webfleet Solutions is controlled and audited through our Data Privacy Officer (DPO) to ensure compliance with the EU General Data Protection Regulation as well as other relevant local privacy legislations.

Our Information Security Management System (ISMS) team performs regular reviews of legal or security requirements which might have an effect on our telematics platform or the informational assets in scope of the ISMS.

HIGHLIGHTS

- **Maximum security and integrity**
  Your data is in safe hands with our ISO 27001 certified system.
- Protecting driver privacy
  WIth our focus on data protection, we have worked together with data privacy groups and work councils to demonstrate our commitment to your privacy.
- **Data deletion**
  Data is marked as dereferenced and overwritten in the event of data deletion to prevent data from being recovered by unauthorised parties.
- **Data retention**
  Per default, we retain all detailed data including precise data tracks for up to ninety (90) days, and current year plus previous two (2) years for our logbook, dashboard and reporting. This may differ due to specific country related regulations.
- **Choose integrity. protect the environment**
  We do our part to provide you a secure platform, which allows you to save costs while doing your part for the environment.
