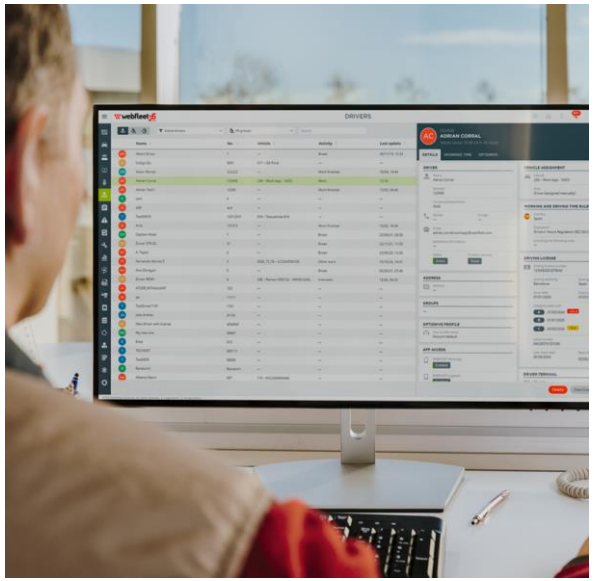
Market opportunity

- Compliance and safety topics are chief concerns for fleets, and elevating standards and efficiency in driver licence checks is expected.
- Fleet operators must meet national[1] and EU regulations, ensuring all employees who drive a vehicle do so with a valid driving licence.
- Non-compliance is a criminal offence and can lead to sanctions and negative financial, operational and reputational repercussions.
- Closing the gap to the competition is a priority, given many already offer driver licence control solutions. For the DACH region this solution is expected.



1. Road Traffic Act (StVG) §21

Driver licence checks regulation

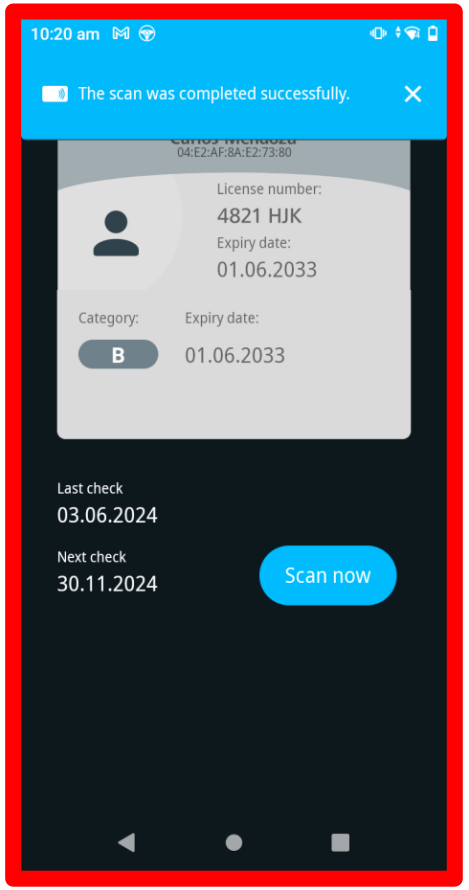
- In Germany fleets must comply with the Road Traffic Act (StVG § 21), which defines a legal basis for driving licence checks.
- The regulation stems from the fact that motor vehicles are seen as a source of danger to the public and the owner is therefore liable for any failure to comply.
- In summary StVG § 21 legislates that:
  - As the owner of a vehicle, an employer must ensure that any driver it employs holds a valid driver's licence.
  - The employer must also ensure that employee drive only the class of vehicles for which their licence permit.
  - The 'owner' of the vehicle in the company normally falls to the managing director or board member as the responsible party for a violation of § 21 StVG.
  - Even if the task is delegated to a fleet manager, the owner is obliged to check that the fleet manager is conducting the checks diligently.
- Regular driver licence checks are the best way to avoid liability for any violation of StVG § 21
  - The driver licence check should be carried out by employers as soon as the employee is provided with a vehicle.
  - The employer should carry out a driver's licence check as soon as the employee is provided with a vehicle.
  - The driver licence check should be carried out every six months, and even more frequently if there is any suspicion that a driver's licence is invalid arises.
- What are the penalties for non-compliance with StVG § 21?
  - Driving without the required licence for the vehicle is a criminal offence, leading to punishments for both the driver and the employer (as owner of the vehicle).
    - The offence is punishable by a fine of up to 180 daily rates or a prison sentence of up to six months.
    - The motor vehicle to which the offence relates may also be confiscated.
  - It's important to note that driving without a physical copy of the licence document, because it was forgotten, or lost, is not a criminal offence.
    - Instead, this is classified as an administrative offence and carries a warning fine of approx. €10. The same applies if the driver's licence has expired.

1. Road Traffic Act (StVG) §21

Highlights

Webfleet Driver Licence Check is a fast, low-effort, location-free digital solution to carryout legally compliant driver licence checks, whenever you need.

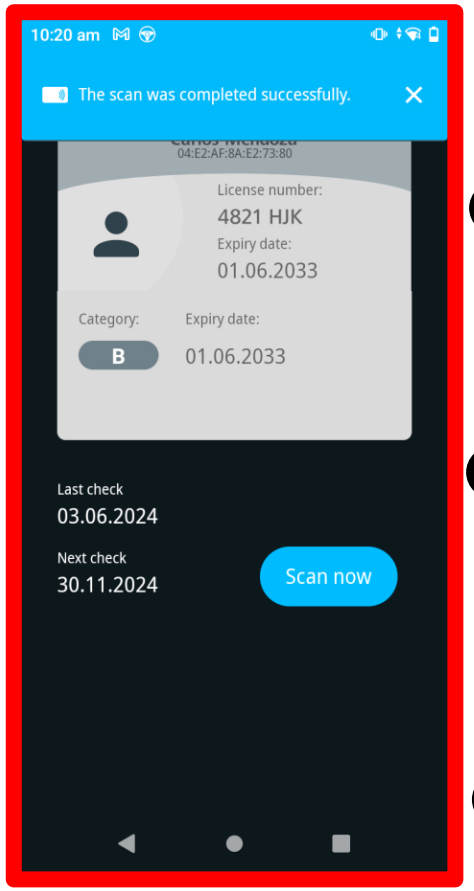
- Exploiting the benefits of NFC contactless technology, a driver licence check can be completed by the driver anywhere with a simple scan using Work App on their smartphone or Driver Terminal (available on PRO M only initially).
  - With a tamper-proof NFC tag affixed to their physical licence, all the driver has to do is hold up and scan their licence with Work App's NFC-enabled reader.
  - Each driver's NFC tag stores a unique identification code, which when read links to the driver licence details in Webfleet, to be quickly verified by the fleet manager.
- For the fleet manager: Transparent status of driver licence details and licence check process in Webfleet with expiry dates, last time check completed and next due check.
- For the driver: Notifications in Work App, alert to upcoming licence expiry and instances when a licence check should be completed.
- Licence checks can be carried out at a frequency determined by company requirements. The verification intervals can be set directly in Webfleet by the fleet manager.
- The solution allows the export and visualisation of the history of completed checks for drivers to demonstrate licence checks were completed. (due October 2024).
- The solution is GDPR compliant and respects driver privacy, with no personal data stored on the NFC tag.



Value proposition at a glance

Target audience	Pain points	Benefits	Value messages and proof points
Fleet type: All vehicles Cars and vans Trucks Truck and trailers **Decision maker:** Fleet Manager CEO Fleet compliance (legal)	• How to check that drivers have valid licences for any company or pool vehicle? • I need a solution that protects the data of drivers and is GDPR compliant. • I need to provide historical proof to authorities that licence checks were completed.	**Fast compliance with driver licence check controls**	**Audit-proof and compliant licence checks** • Quick licence verification process, powered by NFC technology, proves that a driver has a valid licence for the vehicle class. • Automatic notifications in Webfleet and Work App warn the fleet manager and driver to upcoming licence expiry or instances when a licence check was not done on time. • Easily prove checks to authorities and customers with 1 year check history available to export. • The process is fully GDPR compliant and respects the personal data of your drivers. The NFC technology is fully tamper-proof.
	• How do I avoid risk of costs incurred from fines for drivers without valid licences? • How do I avoid costs associated with accidents when insurance is invalidated and refused because the driver doesn't have a valid licence?	**Reduce costs due to invalid licences**	**Reduce costs with greater awareness of licence checks** • There's more awareness of driver licence validity status, reducing the probability of non-compliance fines and costs from insurance invalidity. • Through Work App, the Driver receives automatic alerts and visual indication of validity (colour-coding status labels). • The fleet manager can easily detect those drivers at risk of not having a valid licence via colour-coding status labels in Webfleet (Driver overview table and Driver Detailed view).
	• How can I avoid missing regular licence check? • It is difficult and complex to collect prove to authorities or customers that drivers had valid licence at a specific time. • Manual licence checks are time-consuming and error prone.	**Improve efficiency with automatic licence control**	**Automatic and efficient driver licence control** • Driver licence check is an automatic process and frequency can be set by the fleet manager in line with company best practice. Reminders of licence expiry help owners and drivers keep on top of the driver licence check process. • Driver licence information and status of checks is hosted in a single place, making it easy to detect soon-to-expire licences, check licence validity and easily export licence check history should authorities or customers request the information. • Time-consuming and error-prone manual checks are avoided with the benefit of an automatic process with NFC contactless technology. A driver licence check can be completed anytime, anywhere and in seconds via Work App on the driver smartphone or Driver Terminal (PRO M only initially).

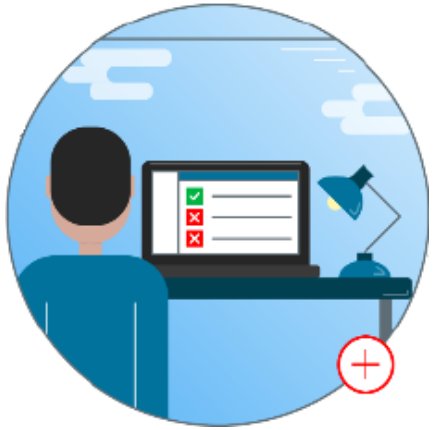
Webfleet Driver Licence Check: How it works



1. The driver receives a **notification in Work App** saying it's time to scan their driver licence.

2. The driver goes to the driver licence view and clicks on the **'Scan Now' button in Work App**, keeping the phone close to NFC tag affixed on the driver licence.

3. Work App confirms that the NFC Tag scanned is the one associated with the driver licence, and then communicates to Webfleet backend that the **driver licence check is done.**



The fleet manager has a **unique NFC Tag code linked to the driver licence** for every driver created in Webfleet. The fleet manager also has registered the **expiration date** for each driver licence.

The UI displays **yellow and red labels to signify when a driver licence is about to expire**, which is seen in driver details view and in the overview table.

The above makes it **easy for the fleet manager to know whether drivers have a valid driver licence** and react accordingly.

Drivers **can also easily control their driver licence validity**, as they are forced to periodically complete the scanning actions.

Work App will show a notification when the licence is about to expire, thereby **encouraging drivers to renew their licence.**

Overview

Licence control based on NFC technology

An NFC tag is affixed to the driver licence, with unique code linked to the driver licence registered in Webfleet.

Tamper-proof NFC tag accessory

A self-adhesive and tamper-proof NFC accessory (destruction on removal). It is 18x18 mm with <1mm thickness.

Automatic notifications

Drivers are notified in Work App when it's time to scan the driver licence. They are also notified when their licence is about to expire. Fleet managers can easily check validity in Webfleet.

Access to historical data

All completed driver licence checks are kept in the system for 1 year. The history of checks is accessible directly from Webfleet.

Flexible solution

Notifications can be configured according to customer needs: how often the scan is done, and how in advance drivers and fleet managers are notified when licence is about to expire.

Included in tariff ECO and higher

This service has no cost, but it requires the fleet to be on ECO or higher tariff [1].

1. Purchase of NFC tags accessory will be required.

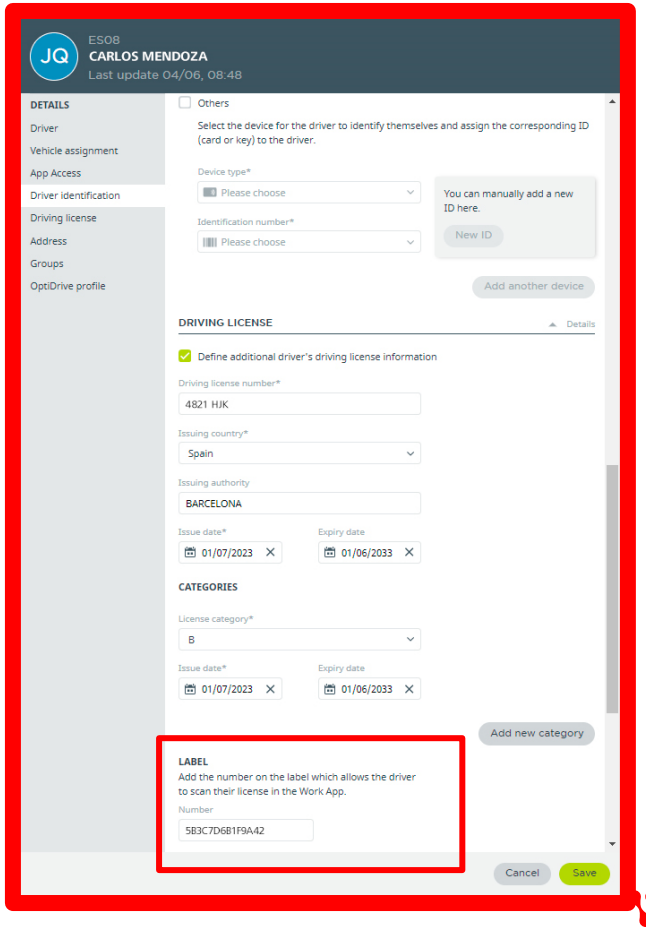
Registering the NFC tag (edit Driver view)

- The fleet manager must give one NFC tag to the driver.
  - The NFC tag must be affixed on the driver's licence.
  - **Recommendation,** the NFC tag is given to the driver in person, and the driver attaches the NFC tag in front of the fleet manager to confirm that the driver licence registered in Webfleet is theirs.

- The NFC tag has a unique ID that must be entered in Webfleet.
  - The unique ID is shown in the NFC tag, but it can be a bit difficult to read.
  - For easier reading, the Fleet Manager can use any standard mobile app to read the NFC tag.
  - **Recommendation:** Use the NFC Tools app.

- How to enter the identification label number (NFC tag unique ID)?
  - The process is manually done by fleet manager.
  - In Driver Details view, click on Edit.
  - Go to the Driver licence section, where there's the **new LABEL section.**
  - Set the unique ID in the **Number field.**

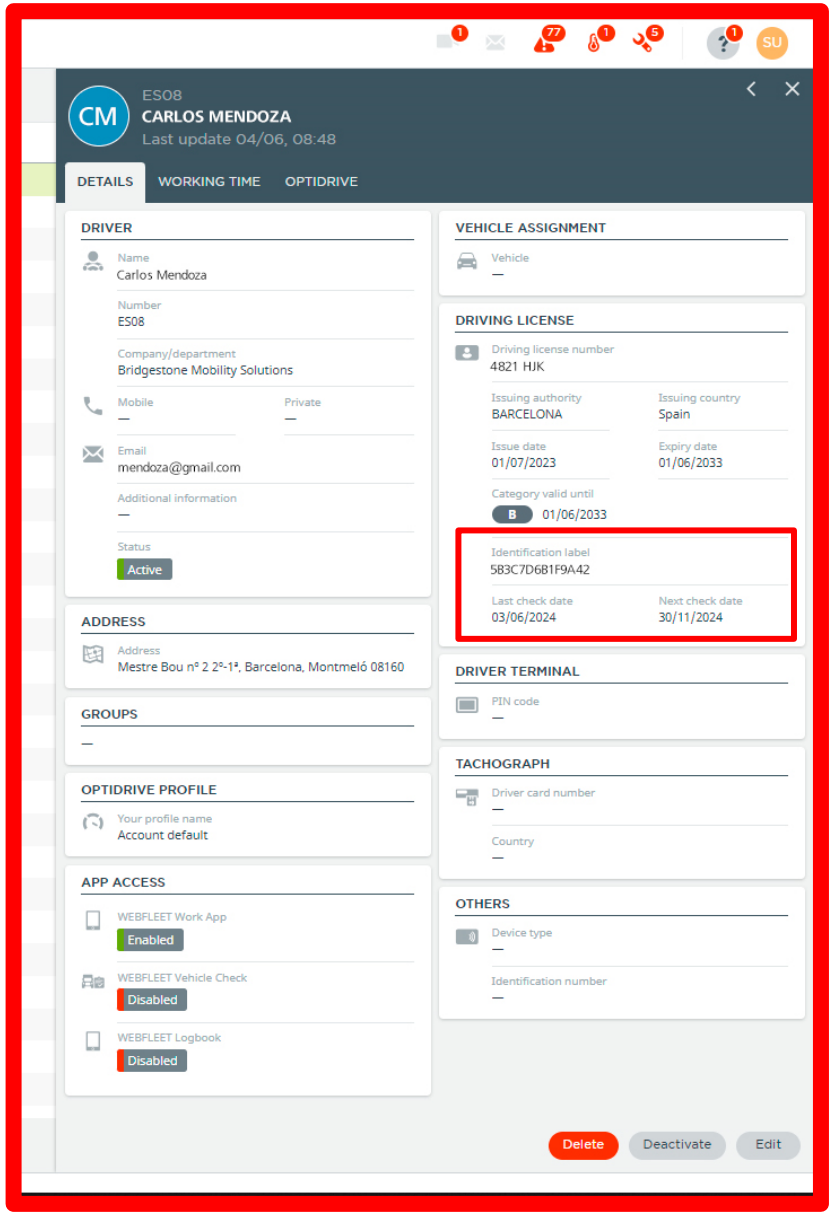
NFC Tools



Driver licence status (Details view)

For fleet managers in Webfleet

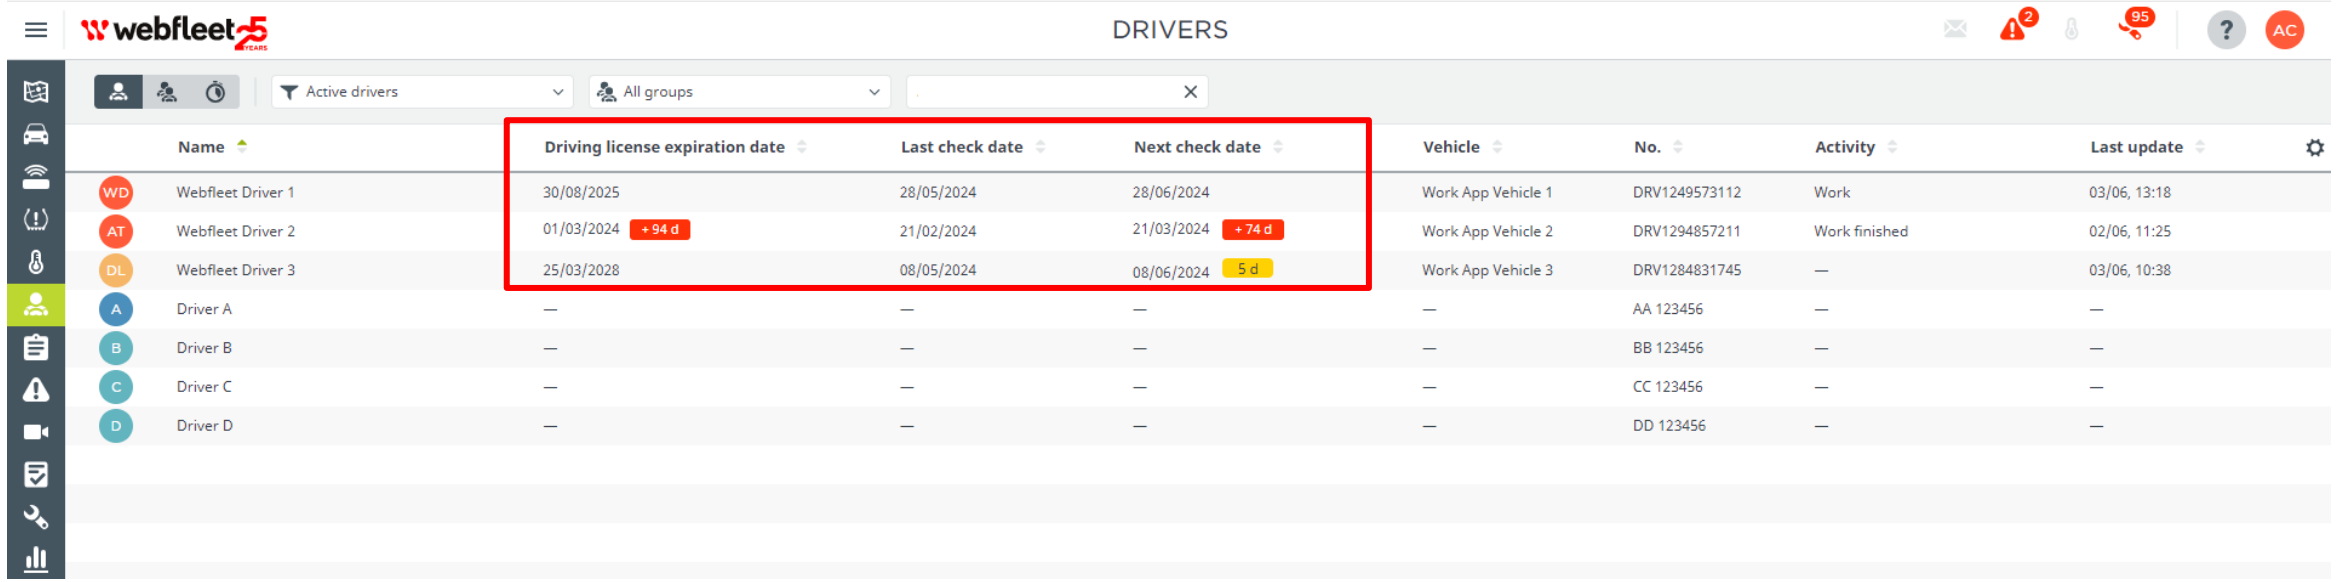
- New fields in Driving licence card:
  - **Identification label:** Shows the unique ID from the NFC tag affixed to the driver licence
  - **Last check date:** Shows last time the driver did a licence check
  - **Next check date:** Shows the next time the driver must do a licence check



Driver licence status: Overview

- New columns in Drivers overview help the fleet manager control the driver licence check process
  - **Last check date:** Last time the driver scanned the NFC tag affixed on their driver licence
  - **Next check date:** Next time the driver must scan the NFC tag
  - **Driver licence expiration date:** When the driver licence expires; the driver must renew the driver licence before this date

- Yellow and red labels are used to indicate which drivers require attention



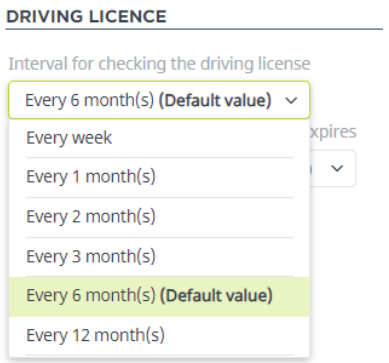
Name	Driving license expiration date	Last check date	Next check date	Vehicle	No.	Activity	Last update
Webfleet Driver 1	30/08/2025	28/05/2024	28/06/2024	Work App Vehicle 1	DRV1249573112	Work	03/06, 13:18
Webfleet Driver 2	01/03/2024 + 94 d	21/02/2024	21/03/2024 + 74 d	Work App Vehicle 2	DRV1294857211	Work finished	02/06, 11:25
Webfleet Driver 3	25/03/2028	08/05/2024	08/06/2024 5 d	Work App Vehicle 3	DRV1284831745	—	03/06, 10:38
Driver A	—	—	—	—	AA 123456	—	—
Driver B	—	—	—	—	BB 123456	—	—
Driver C	—	—	—	—	CC 123456	—	—
Driver D	—	—	—	—	DD 123456	—	—

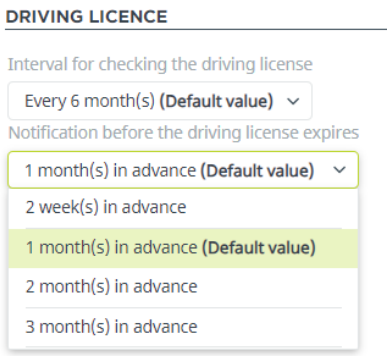
Driver licence Settings: Drivers

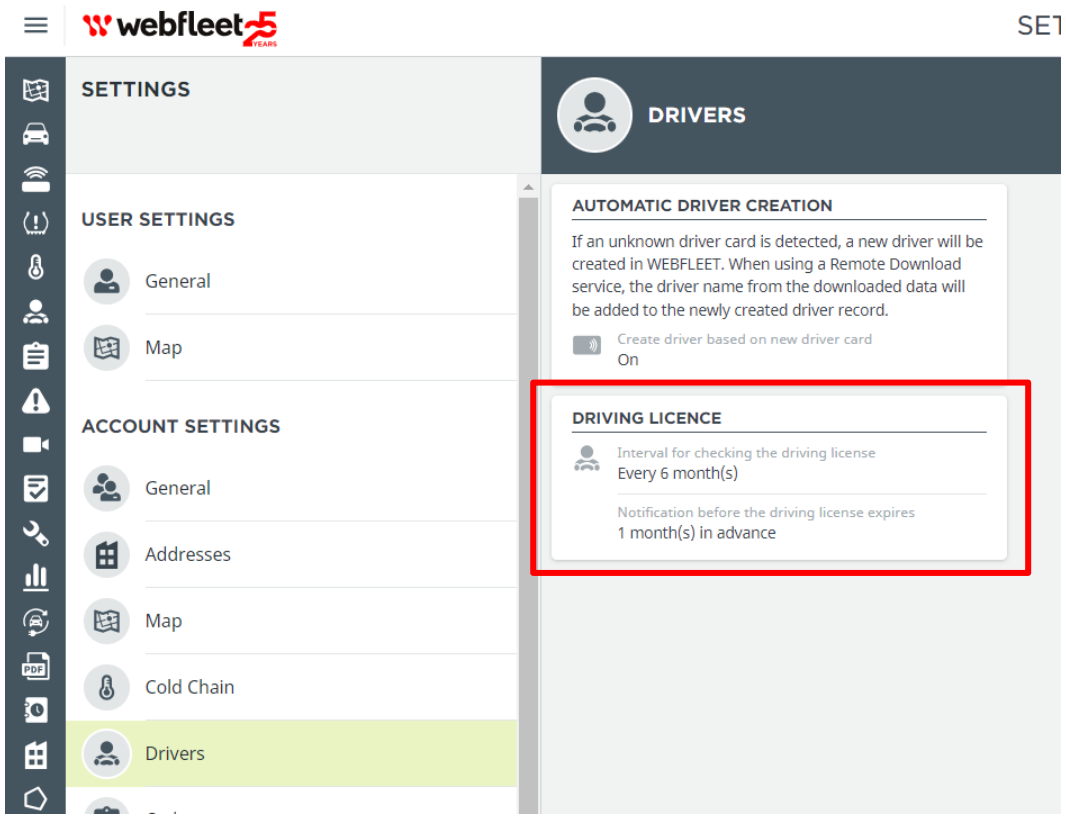
For fleet managers (in Webfleet)

- Two new settings for drivers
  - **Interval for checking the driving licence:** How often the driver will get the request to scan the NFC Tag affixed to the driver licence.
  - **Notification before the driving licence expired:** How much time in advance the driver is notified about the licence expiring.

- The regulation doesn't say any how often employers must check the driver licence of their employees, but the typical timeframe seems to be every 6 months.



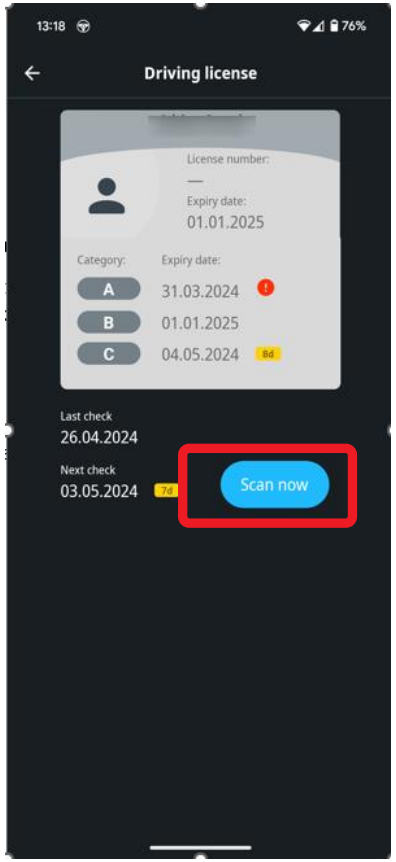


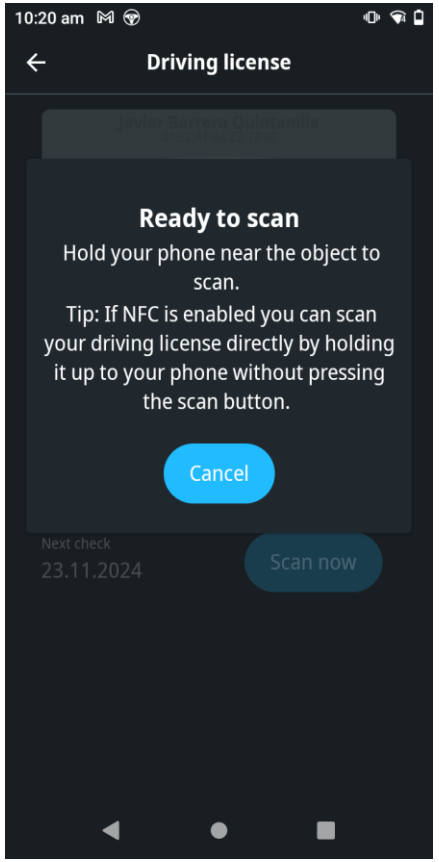


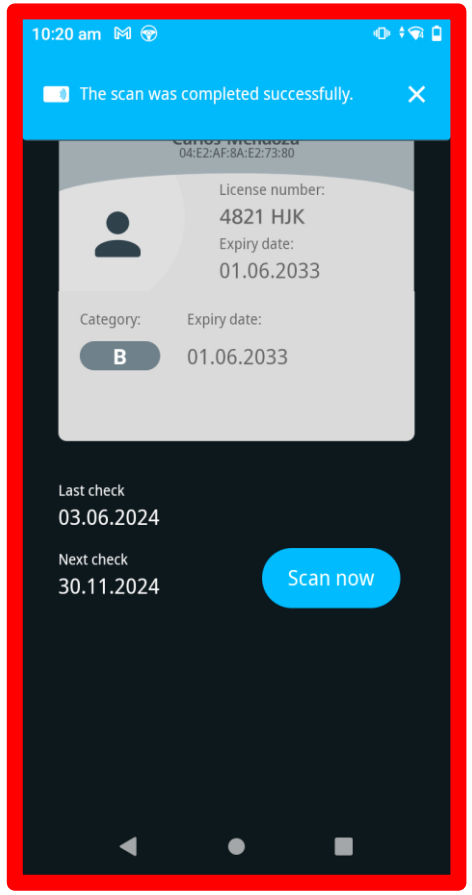
Driver licence check in Work App

For drivers

- New Driver licence view in Work App
  - **It will be clear if the driver licence is registered** in Webfleet for the driver.
  - The driver can at any moment click on the **'Scan now' button** and perform a driver licence check action.
  - After each scan, a notification is shown to confirm to the user that the process went OK.
  - **Yellow/red labels** mark when a certain deadline is approaching or when it already passed. These deadlines are expiration date and next check date.







Benefits

Trust an audit-proof and compliant licence check process

- Quick licence verification process, powered by NFC technology, proves that a driver has a valid licence for the vehicle class.
- Notifications in Webfleet and Work App warn about upcoming licence expirations or instances when licence checks were not done on time.
- Easily prove checks to authorities and customers, with 1 year of licence check history available to export.
- The process is fully GDPR compliant and respects the personal data of your drivers. The NFC technology is fully tamper-proof.

Reduce costs due to invalid licences, with greater awareness of licence checks

- There's more awareness of driver licence validity status, reducing the probability of non-compliance fines and costs from insurance invalidity.
- Through Work App, the driver receives automatic alerts and visual indication of validity (colour-coding status labels).
- The fleet manager can easily detect those drivers at risk of not having a valid licence via colour-coding status labels in Webfleet.

Improve efficiency with automatic driver licence control

- An automatic process with the flexibility to schedule checks and reminders helps owners and drivers stay on top of the process.
- Licence information and check status is hosted in one place, making it easy to detect soon-to-expire licences and export licence check history.
- Time-consuming and error-prone manual checks are avoided with NFC contactless technology.
- A driver licence check can be completed anytime, anywhere and in seconds via Work App on the driver’s smartphone or Driver Terminal.

Requirements and commercial terms

- To access the solution in Webfleet and Work App, all the **fleet vehicles must subscribe to ECO tariff or higher.**
  - In cases where there's a mixed fleet with LINK tariff vehicles, these must upgrade to a minimum of ECO tariff.
  - Remember that Work App only works with ECO tariff and higher.

- There is a **new accessory available for NFC tags**: Driver Licence NFC Tag
  - Accessory package includes 10 NFC tags for €39.90.
  - Resellers and customers **can use their own NFC tags**, but these must be compatible.
  - In case our NFC tags are not used, we recommend using NFC tags with chip NTAG213.
  - The reason is that those chips have a unique ID following pattern:
    - Length of 14 characters that matches regular expression ^[A-Za-z0-9-]*$
  - And having the unique ID with that **length and pattern is mandatory for supporting a third-party NFC tag**

Driver Licence NFC tag accessory
